Crops Feed the World | 4-H Youth Development

Most of the land cleared for agriculture in the tropics does not contribute much to the world's food security but is instead used to produce cattle, soybeans for livestock, timber, and palm oil....

Feeding 9 Billion | National Geographic

Written by Ryan McGuine // The incredible crop yields made possible by modern, intensive agriculture have literally made it possible to feed the world. Fossil fuels, which are used to power mechanized cultivation and as feedstocks for fertilizers and pesticides, are central to intensive agriculture. Indeed, comparisons of historical energy returns to farming (the ratio...

Grow Crops, Not Algae - Sustaining Capabilities

In this paper we take a closer look at rice, a crop that feeds billions of people in the world, and focus in particular on Asia and Africa. On both continents, rice is grown in a wide range of climatic conditions, from river deltas to mountainous regions. Irrigated systems dominate in Asia and rainfed systems in Africa.

Crops that feed the world 7: Rice | SpringerLink

Food crops, such as fruits and vegetables, are harvested for human consumption. Grain crops, such as corn, wheat, and rice, are the world's most popular food crops. Food crops were the first crops to be harvested through agriculture. Agricultural development and the growth of civilizations led to the diversity of other types of crops.

Crops | National Geographic Society

Showing that we could grow staple crops in this way, instead of only niche foods like salad greens,

File Type PDF Crops That Feed The World 5 Sweetpotato Sweetpotatoes

is an important step. This massively efficient production approach would generate enough food to feed an expanding world population.

Are we ready for indoor wheat farms?

For example, beef cattle generally need 8-10 kg of feed to produce 1 kg of meat. In terms of calories, for every 100 calories fed to animals in the form of edible crops, the return is only about 25 calories in the form of meat and dairy products. Figure 2. Global population growth by regions 2010 - 2050.

Feeding the world in 2050 and beyond - Part 1 ...

Commercially, major crop development companies use genetic engineering primarily to improve large cash crops with the most potential for profits, such as corn, cotton, soy, and wheat. Little investment is put into crops, such as cassava, sorghum, or millet which are more relevant for cultivation in poor nations.

How GMOs Can Feed the World

It's to control the staple crops that feed the world. Will GMOs help end world hunger? I don't think so. John Robbins is the author of many bestsellers including "The Food Revolution: How Your Diet Can Help Save Your Life and Our World," the classic "Diet For A New America" and "The New Good Life: Living Better Than Ever in an Age of Less." He ...

Can GMOs Help End World Hunger? | HuffPost
