This book is an easy-to-read collection of statistical stories, with the theme "Errors, Blunders, and Lies". By errors, Salsburg means that our statistical models aren't always right, so we always write them in the form (Observation = Truth + Error). By blunders, we mean that sometimes data is measured that comes from a different distribution than we are interested in. By lies, Salsburg means data that has been falsified. The errors section is the longest and (in my opinion) most interesting.

Facebook has decided to clamp down on the supposed epidemic of fake news by appointing an assortment of "fact-checkers" to vet their news feed... The problem is that these fact-checkers — PolitiFact, FactCheck.org, Snopes, Associated Press and ABC News — are all slanted to the left and have a bad habit of inserting their progressive opinions into "fact-checks" instead of simply ...

### David Salsburg - Wikipedia

Try, for example, to imagine the world without the existence of those two little words personal and computer. But there have also been — how can this be put delicately?— blunders. Some were errors in concept: Bad science chasing a bad idea. Some were errors in execution: This would have worked so well if only it hadn't blown up.
