Array technology for passive direction finding has been developing as an outgrowth of two factors: first, the need to respond retrodirectly (transmit in the same direction as received) to a threat for jamming purposes; second, the need to measure a signal to a high degree of accuracy for targeting or aiming purposes. One of the main concepts of the field of electronic support measures (ESM) is the use of the electronic receiving systems as a means to detect signals for threat ...

**Chapter 5: DF Antenna Arrays | Engineering360**

Usually a pair of spiral antennas are used in this application, having identical parameters except the polarization, which is opposite (one is right-hand, the other left-hand oriented). Spiral antennas are useful for microwave direction-finding. Elements. The antenna includes two conductive spirals or arms, extending from the center outwards.
