Pulp And Paper Mills

A pulp mill is a manufacturing facility that converts wood chips or other plant fiber source into a thick fiber board which can be shipped to a paper mill for further processing. Pulp can be manufactured using mechanical, semi-chemical, or fully chemical methods. The finished product may be either bleached or non-bleached, depending on the customer requirements. Wood and other plant materials used to make pulp contain three main components: cellulose fibres, lignin and hemicelluloses,. The aim o

Pulp mill - Wikipedia

Mills owned by large paper companies have advantages by being vertically integrated; the parent corporation may own timber farms, sawmills, pulp and paper mills, conversion plants, and other end-product manufacturing facilities. Small mills can compete successfully in regional markets, in close proximity to timber sources or customers.
