Enveloping signals include gSE (IRD), HFD (SKF), ESP (DI), Peakvue (CSI), Shock Pulse, and more. Signal being collected will contain the impact spikes showing up at an interval equal to the defect frequency. At early stages, the time domain plot will be a better analysis tool than either a velocity or an acceleration spectrum.

Collecting useful information for spectrum analysis. FFT spectrum is an incredibly useful analysis tool. If a machinery problem exists, FFT spectra provide information to help determine the location of the problem, the cause of the problem and, with trending, how long until the problem becomes critical.
