Plus, they show up well in binoculars or a telescope. There are good observing guides to the planets in the pages of Astronomy, Sky & Telescope, SkyNews magazines, as well as many sources online in other languages. A digital astronomy program or app, such as StarMap 2 or Stellarium also provide precise positions of the Moon and planets in the sky.

Tips for Urban Stargazers - ThoughtCo

Then match the stars on the map with the real stars in the sky. This chart shows the sky as seen from 40 degrees north latitude. When viewing from a lower latitude, stars in the southern sky will appear higher above the horizon while those in the northern sky will be lower.

Monthly Star Chart | Orion Telescopes & Binoculars

October is packed with amazing stargazing this year. It begins with the Harvest Moon, ends with the Hunter's Moon, and features Mars' best appearance of the year. The stars of summer continue to fade in the evening twilight, while those of autumn climb higher into the longer, cooler nights.
